

Doofenshmirtz Evil Incorporated

Chemical Storage Policy — Version 2.0

1. Purpose

Version 2.0 lowers the quantity limit and adds a goo inventory after the basement ooze became self-aware and requested dental coverage.

2. Scope

This policy covers every chemical, goo, ooze, and unexplained glowing liquid on company premises.

3. Storage Rules

3.1 Labeling. Every container must be labeled with its contents and the date it was made. Labels that only say 'DO NOT' are not sufficient.

3.2 Separation. Flammable chemicals are stored in the red cabinet and anything that hums is stored in the blue cabinet.

4. Quantity Limits

No laboratory may store more than 10 liters of flammable liquid outside the red cabinet, down from 20 liters.

5. Disposal

Chemicals are disposed of through Lab Safety. Pouring goo down the drain is prohibited because the drain has filed a complaint.

6. Goo Inventory

All goo must be counted every Monday. Goo that has grown since the last count is reported to Lab Safety, and goo that has learned to speak is reported to HR.

7. Acknowledgment

Handling any chemical constitutes acknowledgment of this policy.
