Inator Development Lifecycle Policy — Version 2.0

1. Purpose

Version 2.0 adds a mandatory platypus-resistance review, because every single inator in Version 1.0 reached the Destruction stage.

2. Scope

This policy applies to every inator project, whether funded, unfunded, or built in the CEO's apartment over a weekend.

3. Stages

Every inator moves through these stages in order.

- Idea: a backstory explaining why the inator is needed
- Sketch: a drawing on a napkin, whiteboard or forearm
- Prototype: a version that works at least once
- Deployment: aimed at the Tri-State Area
- Destruction: usually by a platypus

Skipping the Sketch stage is prohibited after the Untitled Blob-inator incident.

4. Stage Gates

4.1 Prototype Review. A prototype review with Inator R&D is required before deployment. The review lasts at most 30 minutes and must include a demo on a watermelon.

4.2 Deployment Approval. Deployment requires sign-off from the CEO and confirmation that the self-destruct button is installed and labeled.

5. Post-Destruction Review

After every destroyed inator, the team holds a 15-minute review covering what went wrong, who pressed the button, and whether a platypus was involved.

6. Platypus Resistance Review

Before deployment, every inator must survive a 10-minute test against a trained intern in a teal costume and a fedora.

7. Acknowledgment

Starting any inator project constitutes acknowledgment of this policy.
