

Doofenshmirtz Evil Incorporated

Self-Destruct Button Policy — Version 2.0

1. Purpose

Version 2.0 enlarges the button and adds a protective cover, after an analysis found that 80 percent of inators were destroyed by their own self-destruct button.

2. Scope

This policy applies to every inator, gadget, robot and novelty mug capable of doing anything evil.

3. Button Requirements

3.1 Button Size. Each self-destruct button must now be at least 6 inches across, up from 3 inches, because the CEO kept missing the smaller ones during demos.

3.2 Button Placement. The button must be at elbow height and protected by a flip-up cover that a platypus cannot open with one flipper.

4. Testing

Self-destruct buttons are tested by pressing them once, after which the inator must be rebuilt. Legal is still reviewing whether this is efficient.

5. Accidental Activation

Employees who lean on a self-destruct button by accident must report it to Inator R&D and buy the team donuts.

6. Acknowledgment

Building any inator constitutes acknowledgment of this policy.
