

Doofenshmirtz Evil Incorporated

Laboratory Safety Policy — Version 1.0

1. Purpose

This policy keeps employees safe in the laboratories, where most of the company's inators are built, tested, and occasionally pointed at the wrong wall.

2. Scope

This policy applies to anyone entering a laboratory, including visitors, interns, and robots on cleaning duty.

3. Protective Equipment

3.1 Required Gear. Safety goggles and a lab coat are required in every laboratory. Swim goggles are not safety goggles, no matter how tightly they fit.

3.2 Ray Testing Gear. Anyone testing a ray must also wear a mirrored visor, in case the ray is reflected back by a shiny surface or a smug platypus.

4. Inator Testing

4.1 Test Targets. Inators may be tested only on approved targets, such as watermelons, mannequins, and the decommissioned photocopier.

4.2 Countdown Rule. Every test must be preceded by a spoken countdown from five. Shouting 'behold' does not replace the countdown.

5. Spills and Accidents

Spills must be reported to Lab Safety within 15 minutes. Accidents that shrink, enlarge or turn anyone into a different animal must be reported immediately.

6. Acknowledgment

Entering a laboratory constitutes acknowledgment of this policy and a promise never to lick anything glowing.
